Marital status: Married, two children
Gender: Male

ABOUT ME

I am a hands-on, customer-focused technologist with 20+ years of experience and a strong passion for Kubernetes, cloud-native platforms, modern application architectures, and AI. As part of Microsoft's Digital & Application Innovation team, I help customers accelerate their transformation from legacy systems to modern cloud-based platforms, enabling measurable business outcomes. I also create technical content and speak at conferences to share insights on emerging technologies and the Microsoft Azure ecosystem.

My core expertise includes GenAI and multi-agent systems, Kubernetes, Docker, Virtualization, Platform Engineering, Networking, Security, GitOps, software supply chain security, private and public cloud architectures, solution selling, and public speaking.

Prior to Microsoft, I served as a Senior Lead Solution Engineer in VMware's Tanzu organization, where I guided customers through app modernization, Platform Engineering, and Kubernetes initiatives. I actively evangelized cloud-native technologies and the Tanzu portfolio through public speaking and community engagement.

I also contributed to VMware's CTO Ambassador program, strengthening collaboration between R&D and field organizations to align product strategy with customer needs.

Outside of work, I enjoy spending time with my family, reading science-fiction, and staying active through sports.
